

Hello,

I have been a ham radio operator since 1979 and I am very concerned about the impact of BPL on all users of shortwave spectrum (government, military, ham, commercial, even marine) as I believe, based on my understanding of the BPL technology, that the possibility that they may suffer extreme interference from BPL if it is deployed--even in a limited way.

Hams and others have occupied this portion of the radio spectrum for many tens of years, and I hope that this new BPL technology will be fairly evaluated according to its interference in these HF bands.
